

Business and Technology Assessment (BTA)

Our technology consultants evaluate your engineering technology and how it works with the extended enterprise.

BTA Overview

The business and technology assessment typically involves a one-day, on-site evaluation.

During the assessment, our experts:

- Identify current challenges in the design to manufacturing process.
- Discuss your goals to ensure satisfaction.
- Analyze your network.
- Analyze your current software and data management system.
- Evaluate how your engineering data is currently stored and accessed.
- Determine how Engineering Change Orders (ECOs) are handled.
- Determine how Bills of Materials (BOM) are entered and maintained.

Deliverable

Our team of technology consultants will develop a custom plan for digital prototyping success at your company. The plan will include recommendations on training, engineering software, hardware, file management structure, and workflows that are necessary for streamlined manufacturing.

The plan establishes a timeline for action and is normally delivered within 1-3 weeks of the business and technology assessment.

Call to schedule a business and technology assessment for your company.
